PROFESSIONAL SUMMARY

Information Technology graduate with progressive, hands-on cybersecurity experience across GSOC operations, firewall management, and secure software development. Demonstrated ability to automate security workflows, reduce enterprise risk, and quantify cyber exposure using the FAIR model across three internships at Henry Schein.

EDUCATION

Florida State University Tallahassee, FL

B.S. Information Technology | Minor: Business Analytics & Computer Science May 2026

Magna Cum Laude | Dean's List/President's List | Lambda Phi Eta Honor Society. GPA: 3.86/4.0.

EXPERIENCE

Internal SOC Analyst (Contract) September 2026 - Present

Henry Schein Remote

Cybersecurity Intern June 2026 - September 2026

Henry Schein Remote

- Investigated GSOC alerts using Torq to identify over-triggering detection rules; resolved root causes to reduce false positive rates and improve signal fidelity across the security operations environment.
- Built an internal cybersecurity platform using Codex-assisted development, integrating threat intelligence feeds, asset inventory data, and SOAR workflows for zero-day vulnerability response; applied the FAIR model to quantify cyber risk in financial terms for executive decision-making.
- Reviewed and modernized enterprise cybersecurity policies, mapping cross-policy dependencies and control requirements to strengthen governance, traceability, and alignment with NIST and ISO security frameworks.
- Analyzed cybersecurity and data protection policies against NIST CSF-aligned controls and CMM maturity criteria, mapping regulatory requirements, control ownership, and framework alignment to surface compliance gaps and automation opportunities.

Cybersecurity Intern May 2025 - August 2025

Henry Schein Remote

- Analyzed and standardized global firewall rulesets across core and remote entities using Palo Alto Panorama; reduced total rules by 14% through Python-based automation aligned with least-access principles.
- Co-led analysis of customer authentication and authorization processes across external-facing platforms; supported development of a transition strategy to enable centralized access control via Microsoft Entra ID.
- Deployed endpoint risk reduction strategies by restricting access to malicious websites and limiting executable file downloads, mitigating user compromise and minimizing device reimaging.

Digital Architecture Intern May 2024 - August 2024

Henry Schein Remote

- Identified and remediated web application vulnerabilities in Henry Schein's platforms using Burp Suite and OWASP ZAP.
- Automated performance test cases for a new global e-commerce platform using Selenium, ensuring efficiency and reliability in the software development lifecycle.
- Developed and optimized MySQL scripts to convert JSON data into Excel sheets, streamlining data analysis and reporting for leadership decision-making.

Streaming & AV Production September 2024 - May 2026

Florida State Men's Lacrosse Tallahassee, FL

- Set up and operate all video production equipment to livestream practices and games using OBS Studio and Adobe Photoshop; provide live commentary, manage real-time statistics, and update scoreboard graphics.

PROJECTS

AI-Driven Job Application Engine Python, Node.js, LLMs (Cerebras/Groq/DeepSeek)

- Engineered an AI-driven automation tool using LLM-based code generation to streamline job application workflows; integrated multi-provider LLM failover across Cerebras, Groq, OpenRouter, and DeepSeek.

SKILLS

Security & IAM: Splunk, SentinelOne, Palo Alto Panorama, Torq, Microsoft Entra ID, Burp Suite, OWASP ZAP
Languages: Python, SQL, T-SQL, Java, JavaScript, HTML/CSS
Platforms & Tools: Google Cloud Platform, MySQL, Selenium, LLM APIs (OpenAI/Anthropic), OBS Studio
